Office Visit - Mar 03, 2026 (Ridwana)

with J Dakshinamoorthy, MD at Children's Healthcare of Atlanta Snapfinger Woods Pediatrics

Notes from Care Team

Progress Notes by J Dakshinamoorthy, MD at 3/3/2026 8:45 AM

HPI:
Ridwana is a 10w female with the chief complaint of Sick
. History is provided by mom.

Symptoms started Sunday with tactile temp.
She has been fussy and has not been wanting to eat much. Reports her activity level has decreased and mom has been worried about her breathing. Ridwana has been wanting to sleep more.
Last fever was yesterday; overnight temp was 99.6.
She has congestion but no cough. Mom has been using saline and suctioning as needed.
Mom has no symptoms currently.

Feedings: 1-2 oz since 6 AM this AM. She has been slow to finish breast milk and mom has been using syringe for her feeds.
Overnight she had 3 wet diapers (reports small volume in diaper).
Last stool yesterday.

She was seen yesterday at urgent care for temp of 100.4 X 1 day, and Uri symptoms, and was found to have COVID.

She contacted on call provider last night due to decreased feeding concerns and lower activity than normal. She was instructed to follow up today in office.

Recent travel: mom and her flew on airplane back to Atlanta 2 days ago , they were with patient's father who is currently working in South Dakota, and will be back in Atlanta In 1-2 months.

CHRONIC PROBLEMS: There are no active problems to display for this patient.

PHYSICAL EXAMINATION:

Vitals:

	03/03/26 0913
Pulse:	145
Resp:	34
Temp:	36.9 °C (98.5 °F)
TempSrc:	Axillary
SpO2:	98%
Weight:	4.89 kg (10 lb 12.5 oz)

General: well appearing, no acute distress, and alert, active
HEENT: oropharynx clear, moist mucous membranes, and mild nasal congestion bilaterally
Lymph: no significant lymphadenopathy
Chest/Lungs: normal work of breathing, no retractions, and no focal lung sounds, CTAB
CV: RRR, no m/r/g, pulses 2+ bilaterally, and cap refill <2s
Abdomen: soft, non-tender, non-distended, and no organomegaly
Skin: normal, no rashes or lesions

LABS:

No visits with results within 1 Day(s) from this visit.
Latest known visit with results is:

Admission on 03/02/2026, Discharged on 03/02/2026

Component	Date	Value	Ref Range	Status
• Specimen Source	03/02/2026	Nasopharyngeal swab		Final
• SARS-CoV-2 RT-PCR N2+E+RdRP	03/02/2026	POSITIVE (A)	NEGATIVE	Final
• Influenza A Virus RT-PCR	03/02/2026	NEGATIVE	NEGATIVE	Final
• Influenza B Virus RT-PCR	03/02/2026	NEGATIVE	NEGATIVE	Final
• Respiratory Syncytial Virus PCR	03/02/2026	NEGATIVE	NEGATIVE	Final

Comment: Performed by Children's Healthcare of Atlanta at Satellite Blvd, 2660 Satellite Blvd, Duluth,
GA 30096, Director: Ameet Thaker, MD

ASSESSMENT/PLAN:

	ICD-10-CM
1. **Nasal congestion**	**R09.81**
2. COVID-19	U07.1

Extensive discussion regarding symptomatic care of nasal congestion due to COVID 19. Recommended continued use of saline nasal spray and can suction as needed - if congestion is visible and interfering with feeds.
Reviewed offering at least 1/2 - 1 oz breast milk every 1-2 hours, can space if appetite increases (she generally takes 3 oz during a feed), and can use syringe if needed. Okay to supplement with Enfamil Enfalyte if rejecting EBM as per UC instructions.

Monitor fever curve - recommended ER for temps 101 or over due to patient age, and reviewed symptoms of dehydration. Monitor wet diapers.

Follow up office visit at end of week - she had a well child exam scheduled for tomorrow, okay to delay till follow up visit.

She fed well during office visit, and was able to drink remainder of EBM in bottle with minimal breaks ,which is reassuring. She was very active during exam today. All questions answered.

Recheck as needed for persistence, worsening, or appearance of new symptoms.

Additional teaching: teaching provided for the listed diagnoses and/or medications, and understanding confirmed
